DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 26 January 2004 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-33 are rejected under 35 U.S.C. 102(e) as being anticipated by **Jacobi et al.** (Jacobi) (U.S. Patent 6,317,222 B1):

Regarding claims 1, 12, and 23, **Jacobi** teaches a method and an apparatus comprising:

a). creating a plurality of categories, each category identifying an attribute (col. 1, lines 16-22 and 46-49);

- b). associating products (i.e. books, CDs, or videos) having at least one attribute with at least one category (i.e., non-fictions, comedies) (col. 2, lines 46-49);
- c). upon selection of a main product by a user in communication with a visual browser via a computer network, automatically displaying a plurality of related products having at least one attribute in common with the main product that are selectable for purchase by the user (col. 10, lines 45 – 63; col. 7, lines 5-9; col. 4, lines 2-6).

Regarding claims 3, 14, and 25, **Jacobi** further teaches a step comprising, displaying at least one other product that is not related by a category to the main product (col. 4, lines 2-6).

Regarding claims 4, 15, and 26, **Jacobi** further teaches a step comprising, assigning a weight bias to each category based upon a predefined importance of the respective category (col. 3, lines 23-27).

Regarding claims 5, 16, and 27, **Jacobi** further teaches a step comprising:

- a). determining "like" categories for the main product, a "like" category being a category that the main product is associated with (col. 8, lines 60-63);
- b). selecting one of the "like" categories (col. 10, line 63 – col. 11, line 2); and
- c). randomly selecting the at least one other related product from the selected "like" category (col. 5, lines 19-22).

Regarding claims 6, 17, and 28, **Jacobi** further teaches a step wherein selecting one of the "like" categories includes utilizing the weight biases for the categories in a randomly based selection algorithm to select one of the "like" categories (col. 8, lines 28-39).

Regarding claims 7, 18, and 29, **Jacobi** further teaches a step comprising:

- a). determining "dislike" categories for the main product, a "dislike" category being a category that the main product is not associated with (col. 15, lines 58-62);
- b). selecting one of the "dislike" categories utilizing the weight biases for the categories in a randomly based selection algorithm (col. 5, lines 19-31); and
- c). randomly selecting at least one other product from the selected "dislike" category (col. 5, lines 19-31).

Regarding claims 8, 19, and 30, **Jacobi** further teaches a step comprising:

- a). selecting a category from the plurality of categories utilizing the weight biases of the categories in a randomly based selection algorithm (col. 14, lines 36-48);
and
- b). randomly selecting a product from the selected category (col. 5, lines 19-22).

Regarding claims 9, 20, and 31, **Jacobi** further teaches a step comprising:

a). scoring each product based upon weight biases of "like" categories (Fig. 5, element 180) and "dislike" categories (Fig. 5, element 190), a "like" category being a category that the main product is associated with, a "dislike" category being a category that the main product is not associated with, a weight bias being a predefined value assigned to each respective category to denote the respective category's importance (col. 8, lines 28-38);

b). creating a "like" score table, the "like" score table including a "like" score for each of the products indicating the relatedness of the product to the main product (Fig. 1, element 60); and

c). randomly selecting the at least one other related product from the "like" score table using the "like" scores as a weight bias (col. 12, lines 61-65).

Regarding claims 10, 21, and 32, **Jacobi** further teaches a step comprising:

a). creating a "dislike" score table, the "dislike" score table including a "dislike" score for each product indicating the unrelatedness of the product to the main product, the "dislike" score table being the transposition of the "like score table" (col. 8, lines 28-39); and

b). randomly selecting at least one other product from the "dislike" score table using the "dislike" scores as a weight bias (col. 5, lines 19-31).

Regarding claims 11, 22, and 33, **Jacobi** further teaches a step of selecting at least one other product at random from one of the plurality of categories (col. 5, lines 19-22).

4. Applicant's arguments with respect to claims 1-33 have been considered but are moot in view of the new ground(s) of rejection.
